### Mix and Match TimeTrak Data Collection Options to Meet Any Challenge

#### Enhance Time and Data Collection Using Your Current ID Badges or No Badges at All

- Easily set user-defined options permit use of one badge technology for all your needs. TimeTrak Systems' punch terminals read your existing badges and most currently available RFID badges used by access control/parking and security systems.
- When your staffing requirements expand, your time and attendance system can also expand, and easily. TimeTrak strives to maintain support for and compatibility with all older terminals as you add newer terminals of any type.

#### Mix and Match Biometric, Barcode, Magstripe Prox Card, and simple PIN Entry

- Choose the type of data collection terminal(s) your company needs, mixing and matching badge and/or biometric readers, communication types, meeting any data collection or ID validation challenge you're facing.
- Place the data collection terminals you need where you need them, and assign employees to one or all data collection terminals, or limit employees to any number of specific units you desire.

#### Configure Terminals to Collect Other Types of Data

- TimeTrak Systems' terminals can also be of assistance if you require data collection for ERP software systems beyond that of standard time and attendance.

You may configure the family of terminals to collect such data as number of pieces produced or rejected per worker. This data may then be handled individually or combined into up to 10 different data collection files. User-defined prompts and multiple validation methods make TimeTrak Systems ideal for customized applications.

#### Employee Self-Service & Checking Key Data

- Employees can receive group or individual messages and check data as paid/payable hours, punch history, vacation hours available, sick hours available, etc.
